

NICOLÁS SالدARRIAGA CARVAJAL

Full-Stack Developer for Financial Data and Systems | Python, Flask, PostgreSQL, Azure | Development Finance

Bogotá D.C, Colombia | nsaldaca@gmail.com | linkedin.com/in/nsaldaca | Portfolio: nsaldaca-alt.github.io/portfolio

PROFILE

I design, build and run the software and knowledge decision-makers decide with. Currently, there are two working production web platforms on Microsoft Azure that I built. These operate at prsier.com. I drafted and presented a data management strategy for the IDB Treasury's fixed-income portfolio and built and integrated improved portfolio-tracking systems and processes for IFAD LAC front-office. I pair full-stack engineering with an inside view of how treasury, portfolio and teams use their data. Interested in LAC Food Systems policies, I occasionally support related research projects.

PROFESSIONAL EXPERIENCE

Strategist Associate | *prsier.com, Bogotá, Colombia* | February 2026 – Present

- Designed, built, deployed and maintain alone two production Flask web applications on Microsoft Azure (409 commits, ~69k lines of Python, Jul–Oct 2026): BOps, the finance-operations platform (invoices, treasury projection, reconciliation, sales and budget dashboards), and Prsier One, the client delivery portal (permission matrix, watermarked document viewer).
- Built APIs and integrations: a token-based REST API and MCP server for scripts and AI agents; clients for the Siigo accounting API, Microsoft Graph/SharePoint and a Microsoft Teams bot; Microsoft Entra ID single sign-on across both apps.
- Designed the PostgreSQL data layer (Idempotent migrations, geo-redundant backups, encrypted personal data) and generate the firm's treasury model in Python: an Excel workbook with committed, weighted and full-pipeline cash scenarios.
- Replaced an AI vision invoice reader with a deterministic parser, cutting confidently wrong totals from 19% to 5.3% (held-out test, n=281); ~740 automated tests, OWASP ASVS Level 2 security review and documented incident fixes.

Food Systems Consultant | *OECD Trade and Agriculture Directorate, Contract* | Feb – Dec 2026

- Authored two ~15,000-word background notes on Colombia (food loss and waste measurement; equal opportunities in food systems), each backed by a sources database where no claim ships without a source ID; both accepted.
- Co-organised two MADR–OECD workshops in Bogotá (Jul 2026, ~90 participants: ministries, statistical agencies, private sector, FAO, IDB, ECLAC) and supported four expert focus groups.

Data Portfolio Support Intern | *Inter-American Development Bank, Washington D.C.* | Jun – Aug 2025

- Processed 101,156 fixed-income investment files using machine learning classification, cutting file retrieval time by 93%. Also, I built a centralised data platform (14,987 bond definitions, 13,846 strategy records) with Python and Visual Basic (Excel), reducing manual processing time 60% and systematising portfolio reporting.

Front Office Research Intern | *IFAD, Rome, Italy* | Jul 2024 – Jan 2025

- Automated portfolio information flow and impact tracking for 30+ LAC projects (US\$500M+), cutting knowledge-request processing time 85% and informing a 55% rise in thematic work, mostly rural business development; the same tools became a covenant-tracking system (35+ KPIs per project) adopted across the region. I also reviewed 620+ knowledge products and set quality-control protocols and a new KPI reporting system, adopted department-wide at the time.

Undergraduate Research Assistant | *Universidad de los Andes, Bogotá, Colombia* | Aug 2023 – Jun 2024

- Mixed-methods impact study of 1,774 community initiatives and 33,000+ development records in post-conflict territories (K-means clustering, TF-IDF vectorisation) to identify investment gaps.

EDUCATION

Universidad de los Andes, Bogotá, Colombia | 2020 – 2025

BSc Food Engineering, Faculty of Engineering | (Partial) Minor in Development Studies, CIDER

SKILLS

Software: Python (Flask, SQLAlchemy, pandas, NumPy, pytest), SQL (PostgreSQL), JavaScript, HTML/CSS, REST APIs, MCP, Git/GitHub, Microsoft Azure (App Service, PostgreSQL, Blob Storage, Key Vault, Entra ID, Bot Service), Microsoft Graph, LLM applications, AI-assisted engineering.

Data & finance: ML classification and clustering (K-means), TF-IDF, BM25 retrieval, geospatial analysis, Power BI, Excel/VBA financial modelling, treasury and cash-flow scenario planning, portfolio and KPI tracking.

Additional: World Food Forum Colombia National Chapter, Founder and Financial Coordinator (2025 – 2026) | Languages: Spanish (native), English (fluent), French (conversational)
